1. Introduction

- Social networking sites allow users to interact with others and share ideas, activities, events, and interests with others in their own networks.
 - Millions of people have signed up for social networking sites like MySpace, Facebook, Orkut, and Google+, and many of them use them regularly. It is a quick means of communication where regular news updates are available .
-

-
-
- There are hundreds of social networking sites that accommodate a wide range of behaviours and interests thanks to their diverse technical affordances.
 - Sites also differ in how much new information and communication tools—like mobile networking, blogging, and photo/video sharing—they integrate.
-

2. Project Workflow

- At first login page appears.
 - If the user is new then the user has to register .
 - After the user is registered, can login and perform certain tasks.
 - Then after the login process:
 - ◆ User can search for other users and can send friend request.
 - ◆ User can search for other registered user.
 - ◆ See the users profile image if applied.
 - ◆ User can see his/her accepted friends information.
 - System Administrator will not be able to modify users database for security reasons but can disable or delete user.
-

3. Tools & Frameworks Used

→ Tools:

- ◆ Eclipse IDE
- ◆ MySQL WorkBench

→ Frameworks:

- ◆ HTML
 - ◆ CSS
 - ◆ JDBC
 - ◆ Javascript
 - ◆ JSP web Framework
-

4. Concepts Used

→ MVC Architecture

- ◆ The web browser sends an HTTP request to a controller (Servlet).
 - ◆ The controller (servlet) gets a model object with data from the database or other sources.
 - ◆ The controller(servlet) redirects to a web page (JSP) with model data.
 - ◆ Finally, the web page(JSP) will be displayed with model data on the browser.
-

→ JSP Servlets

- ◆ Java servlets are Java classes that are designed to respond to HTTP requests in the context of a Web application

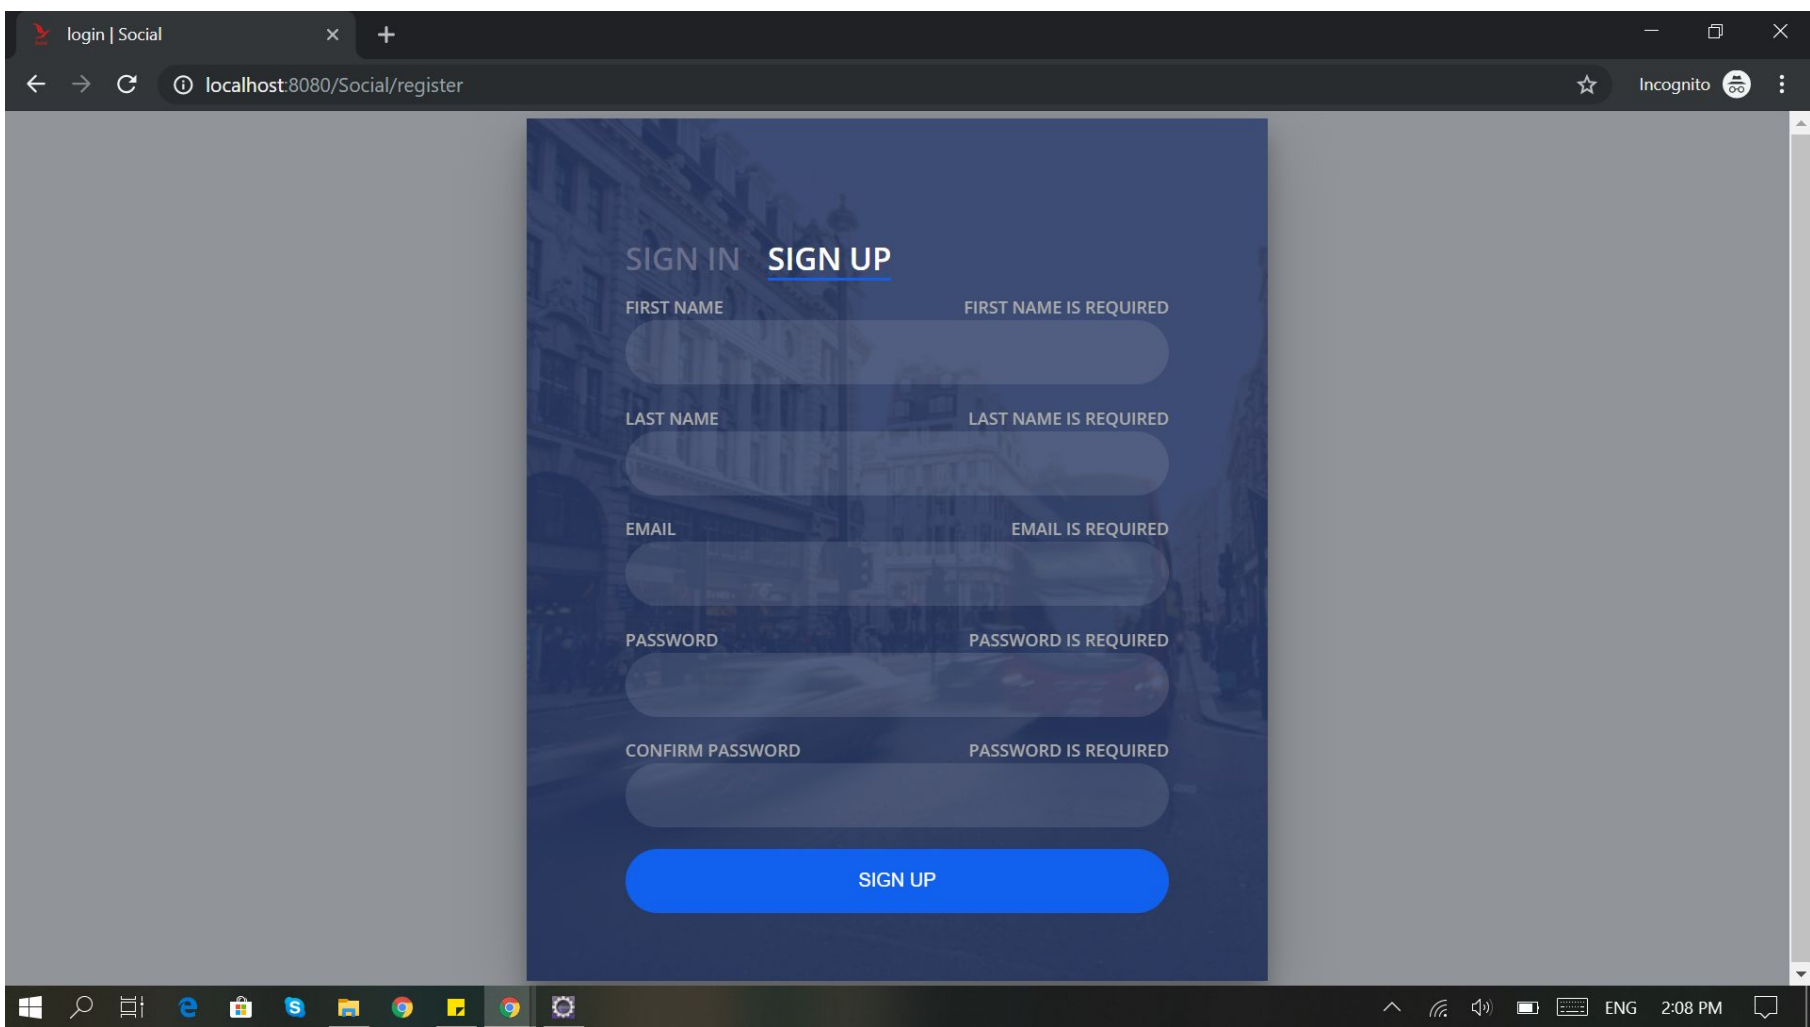

→ JDBC Connectivity

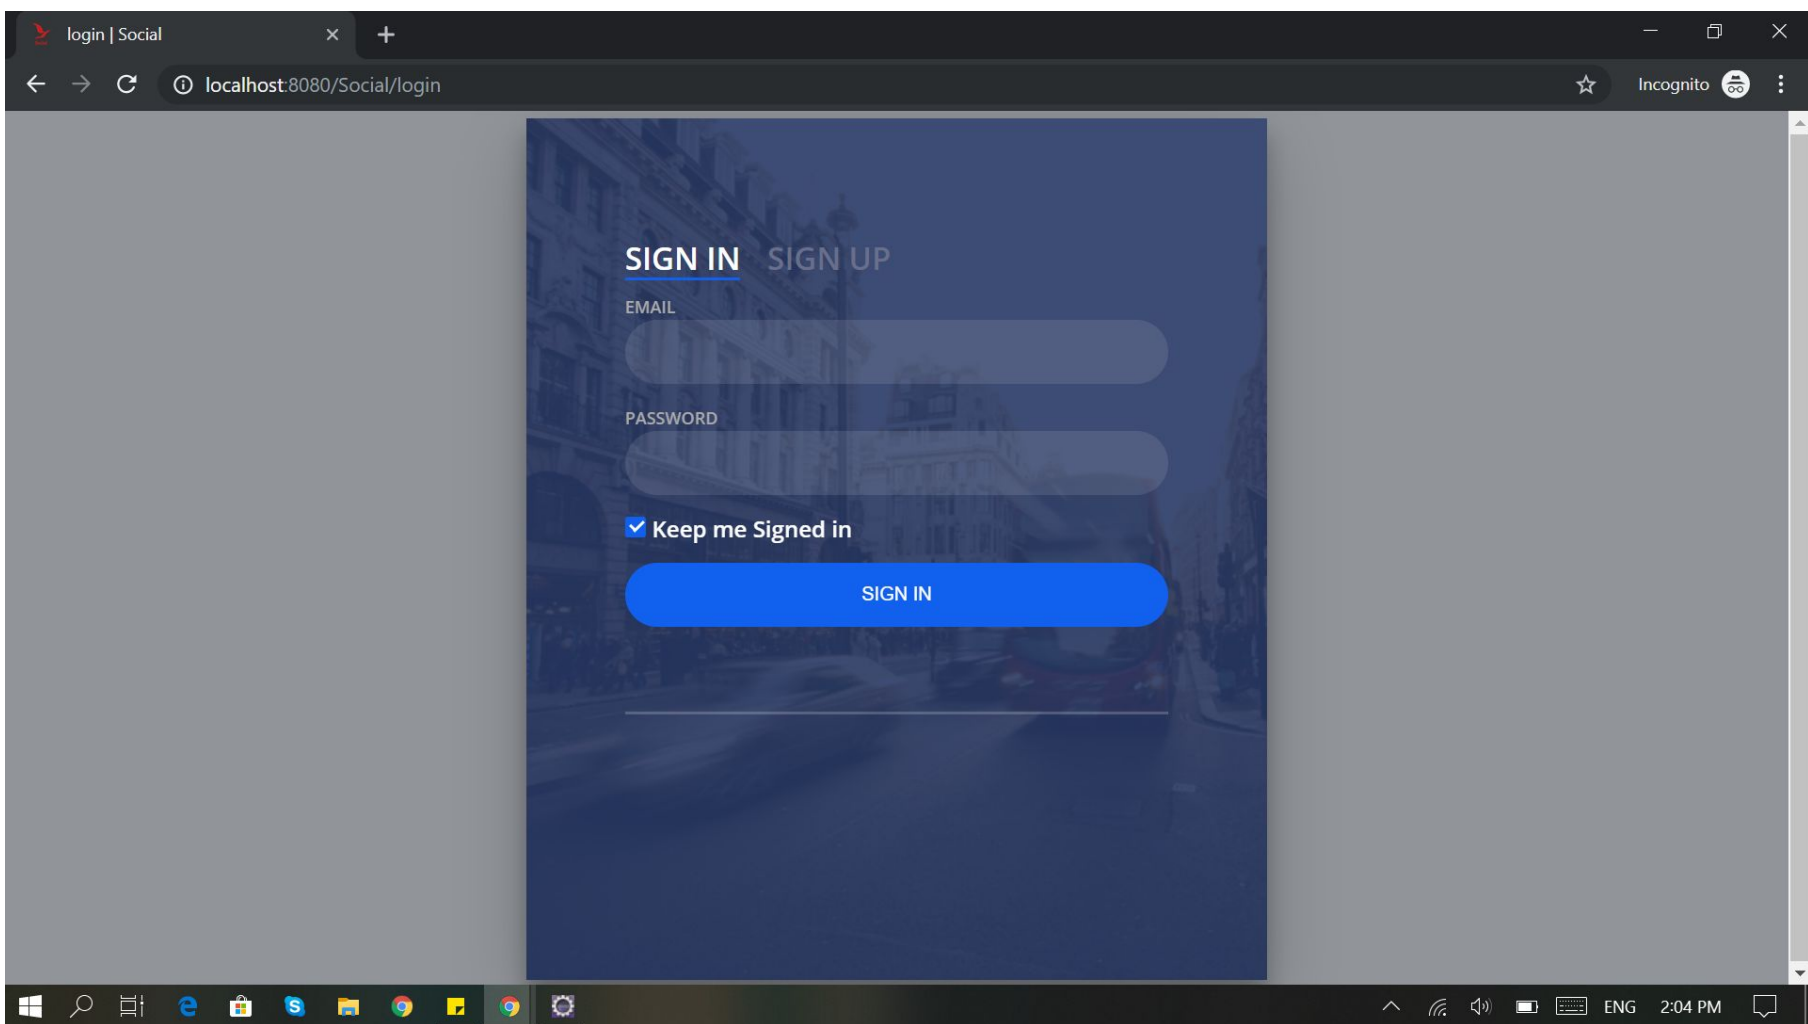

- ◆ Java API that manages connecting to a database, issuing queries and commands, and handling result sets obtained from the database.

→ Sql Querying

- ◆ Java web application communicates directly with a MySQL database using the Java Database Connectivity API.

6. Conclusion

- A deliberate effort was made to construct a website that would produce a suitable online social networking system while developing the system, using the tools, techniques, and resources that were available.
 - The website was created with an aim on making it as user-friendly as possible. As a result, one may hope that the system will be usable by any user and suit his or her needs in a sufficient manner.
-

7. Future Scope

- We can work on its privacy feature to tighten its security.
 - Filter fake accounts.
 - Apply time limit feature for addicted users.
 - Add like and dislike button
-

Thank you
